

INTERPROFESSIONAL JOURNAL OF HEALTH SCIENCES

Interprof. J. Health Sci. Vol.21, Issue 1-2, January-December 2023

Editorial Note

Research is not a static phenomenon; rather, it is strengthened through collaborative efforts. The selection of an appropriate public forum for the dissemination of each experimental series is paramount, akin to the meticulous control of variables within experimental studies. In light of the contemporary scientific milieu, it is incumbent upon us to broaden the geographical and institutional locales for research endeavors, thereby nurturing scientific ingenuity, as opposed to restricting research to serve the interests of a select few. Moreover, when research is underpinned by public funding, it is imperative that the resultant findings be accessible to the public domain. These findings, which are poised to benefit a myriad of individuals across diverse scientific domains, should not remain esoteric. The Interprofessional Journal of Health Sciences (Interprof. J. Health Sci.) commits to facilitating this accessibility. By publishing in English, the lingua franca of the global scientific community, our journal ensures the widespread dissemination of new insights and developments. Currently, we are witnessing an exponential augmentation in knowledge, and to this end, Interprof. J. Health Sci. encompasses a broad spectrum of scholarly articles, encompassing reviews, original research, brief reports, case studies, communications, and editorial correspondences.

The journal's primary mission, being peer-reviewed and committed to prompt publication, is the distribution of contemporary, high-caliber knowledge spanning health, science, technology, biomedical, and socio-medical sciences. Scientists and readers engaging with the current and subsequent volumes will encounter a comprehensive array of biological research, potentially offering relevant applications to their own scholarly inquiries. Integral to the collaborative process of scientific advancement, our journal aids in the dissemination of information to the global scientific community. It is acknowledged that research advancements are typically incremental; seismic technological breakthroughs are the exception rather than the norm. These incremental advancements are the lifeblood of the scientific community.

Our aspiration is to actively participate in this process, by disseminating the collective expertise of researchers both within Thailand and internationally, thereby contributing to the bedrock of scientific knowledge. In addition, we have streamlined the manuscript submission process through our online portal (<https://li05.tci-thaijo.org/index.php/IJHS>) facilitating ease of contribution for researchers worldwide. The editorial board extends profound gratitude to all contributors to this volume, particularly acknowledging those who, despite considerable time constraints, have contributed their scholarly works. Our heartfelt appreciation is also extended to our esteemed colleagues, involving at least three reviewers per manuscript in the journal's peer-review process, for their invaluable dedication to the editorial and proofreading tasks. Lastly, the editorial board remains receptive to and encourages feedback and constructive suggestions from our readership, with the aim of continually enhancing the journal's quality.
